**Energy Monitoring**

**Measuring Energy (CO₂)**

1. Enables CO₂ levels to be monitored in the real time.
2. Provides a detailed understanding of emissions in each process, as well as the opportunity to reduce them.

**Establishing LCM Business Practices**

1. Using building diagnostics to understand energy consumption
2. Establishing, implementing and providing operational support for energy-saving plans

1. Energy-saving plans.
2. Construction and engineering
3. Effectiveness verification
4. Creation of additional improvements.

**Visualization**

- Measuring CO₂ emissions for each process
- Analyzing and accumulating data on the effects

**Power Consumption and Demand Management**

- Fuel Measurements

**Diet Construction Navigator**

1. Energy-saving measures
2. BEMS Building Management

**FUJITA CORPORATION**
